AUTOMATE YOUR GROWTH

with AI solutions that work for you

All-In Solutions

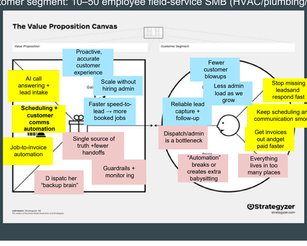
How We Can Help

Stop Missing Leads. Stop Chasing Details.
Start Running a Smoother Business.

We help service businesses stop missing leads, stabilize scheduling and communication, and get paid faster — using practical AI that works with the tools you already use. Our approach focuses on fixing real operational bottlenecks, not adding more software, so your business runs smoother as you grow.

Value Proposition Canvas –AI Implementation for HVAC

Customer segment: 10–50 employee field-service SMB (HVAC/plumbing/electrical)



Minimum Viable Product

- Lead intake,
- Scheduling and customer communication automation
- Job-to-invoice automation.

It directly targets missed leads, dispatch stress, customer blowups, and poor cash flow.

Rationale

- Highest-frequency, highest-ROI workflows
- Integration with existing tools
- Show measurable wins quickly
- Reduce admin needs without a full system overhaul.

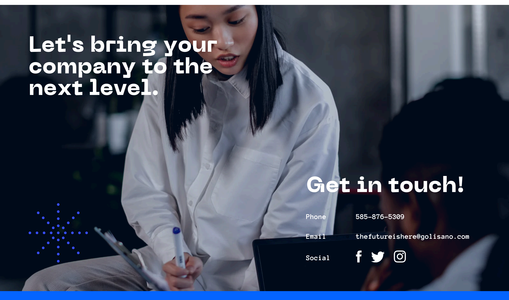
What's left out because they're higher risk:

- AI pricing
- Inventory optimization
- CRM replacement

We add them after learning what customers actually want once the core product demonstrates value reliably.

Alignment with strategy and validated needs

Aligns well to the top jobs/pains/gains. Strategically, it's actionable and comprehensive, and it demonstrates value right away to build trust for more complex implementations.



Let's bring your company to the next level.

Strategic Framework Foundation

Selection and Justification

- **Effectuation and Jobs To Be Done**
  - **The industry is in its nascent stage so making the most of what we have right now is key**
  - **The solutions must be oriented around the customer needs in order to convince them to embrace a new service,**

Stages of Growth

Now

- Effectuation to strike while the iron's hot and makes the most of what we currently have
- JTBD framework ensures applicability and product-market fit

Near Future

- Red ocean forms as the space gets more crowded
- Differentiation through established brand identity and trust will be key

- What does this framework reveal about my competitive advantage?
  - JTBD guides me to rapidly build solutions oriented around real operational problems, which is one of fundamental advantages.
  - Effectuation enables relatively immediate learning and market feedback for iterating in an industry that will get competitive quickly
- Where are the opportunities my competitors might be missing?
  - Competitors are chasing the big shiny objects instead of focusing on more boring, but very real problems
- What does this tell me about how to position my business?
  - It tells me how to brand my solutions as operational enhancements, not a brand new way of doing business.
- How should this framework analysis guide my Product, Price, and Place decisions?
  - Product scope should be narrow at first, price should be relative to actual revenue increases/cost savings, and place needs to involve building relationships and trust through pilot programs
- What are the risks or challenges this framework helps me identify
  - Not being specific enough to any given industry, not building trust properly, and running before we walk. My strategic framework is a good guardrail system against these problems though when followed correctly.

- What are the 3-4 most critical insights from my framework analysis?
  - Customers trust solutions that solve their pain points, not sophistication of features, and trust is everything in frontier industries.
  - The best solutions might be to boring problems
  - How fast I can learn and iterate is of the utmost importance to finding maximum product market fit
- What assumptions do I need to test with customers?
  - That missed lead in-take and slow follow up are truly painful financially
  - It's possible to establish enough trust in AI to allow it take over customer-facing tasks
  - That businesses will pay for it
- What market information do I need to gather to validate my strategic direction?
  - Stats on how often leads are missed and how valuable each missed lead is
  - How much admin time is wasted and can be optimized
  - Current tools being used and the gaps in their functionality
  - What customers will pay for solutions that solve these problems
- How does this strategic foundation focus my marketing efforts?
  - Widespread advertising is futile. I need to build relationships with business owners and learn about the problems they're dealing with right now and how I can build powerful solutions to those problems.
